Re: Goodfellow Federal Center –Building 105 Air and Wipe Sampling Evaluation Addendum
Project No. 121244

Dear Ms. Czarnecki:

Thank you for the opportunity to provide the General Services Administration (GSA) with the above referenced environmental sampling activities. The following is our report.

INTRODUCTION

As requested, Burns & McDonnell conducted area air sampling and wipe sampling for the presence of seven (7) RCRA metals including arsenic, barium, cadmium, chromium, lead, selenium, and silver and dust wipe sampling and testing for lead within the warehouse on the first floor of building 105 of the Goodfellow Federal Center located at 4300 Goodfellow Boulevard in St. Louis, Missouri. The purpose of the investigation was to provide ongoing sampling data to monitor conditions at the site. This report serves as an addendum to the semiannual report titled *Goodfellow Federal Center – Metals in Settled Dust Sampling – Building 105*, dated January 12, 2022.

SAMPLING METHODOLOGY

Dust wipe sampling was conducted in accordance with ASTM Standard E1728: *Standard Practice for Collection of Settled Dust Samples Using Wipe Sampling Methods for Subsequent Lead Determination* and ASTM Standard D6966: *Standard Practice for Collection of Settled Dust Samples Using Wipe Sampling Methods for Subsequent Determination of Metals*. ASTM Standards E1728 and D6966 are consistent with the methodology described in the Housing and Urban Development Guidelines-Appendix 13.1 and 40 CFR 745.63. The Brookhaven National Laboratory's Surface Wipe Sampling Procedure (IH75190) was also used as a guideline.

A representative surface area of approximately one square foot (1 SF) was measured and delineated. The dust wipe samples were collected using dedicated dust wipe cloths meeting ASTM E1792 Standard. Each dust wipe cloth was pre-moistened and individually wrapped. Each sample was collected by wiping in a back and forth "S" pattern over a measured sampling area using a clean, disposable glove. Then, the wipe was folded over itself and the area was wiped again in a direction perpendicular to the first wipe orientation. Then, the wipe folded over itself again and the area was wiped around the perimeter. The wipe sample was then placed into a labeled, clean container.

Air samples for RCRA metals were collected on 37-millimeter (mm) cassettes with 0.8 micrometer (µm) mixed cellulose ester (MCE) filters, using powered air sampling pumps, in accordance with the National Institute for Occupational Safety and Health (NIOSH) Method 7300. The sampling strategy included collecting a minimum sample volume of 500 liters based on the calibrated pump flow rate and sample duration.

All samples were submitted under chain-of-custody to Environmental Hazards Services, LLC (EHS) in Richmond, Virginia for independent analysis of 7 RCRA metals. Air samples were analyzed by Inductively-Coupled Plasma (ICP) according to NIOSH method 7300. Wipe samples were analyzed according to Environmental Protection Agency (EPA) method SW846-3050B/7000B. EHS is accredited under the American Industrial Hygiene Association (AIHA) Industrial Hygiene Laboratory Accreditation Program (IHLAP) program, identification number LAP-100420.

SAMPLE SUMMARY AND RESULTS

Air sample(s) were collected on January 13, 2022, by Ashley Anstaett of Burns & McDonnell. One (1) air sample was collected. This sample was collected from the table with the phone by column E43 in the warehouse of building 105. All analytes were below laboratory reporting limits. The complete air sampling laboratory report from EHS is included as Appendix A.

Wipe sample(s) were collected on January 13, 2022, by Ashley Anstaett of Burns & McDonnell. Three (3) wipe samples were collected. The sample locations and results are listed below. The complete wipe sampling laboratory report from EHS is included as Appendix B.

- Long steel table between columns D43 and D44 in the warehouse of building 105
    - Arsenic, chromium, lead, selenium, and silver were below laboratory reporting limits
    - Barium was detected at 0.56 micrograms per square foot (µg/sq. ft), below the clean area limit of 3,094 µg/sq. ft
    - Cadmium was detected at 0.20 µg/sq. ft, below the clean area limit of 31 µg/sq. ft
- Bottom shelf of coat rack near column E43 in the warehouse of building 105
    - Arsenic and selenium were below laboratory reporting limits
    - Barium was detected at 26 µg/sq. ft, below the clean area limit of 3,094 µg/sq. ft
    - Cadmium was detected at 1.9 µg/sq. ft, below the clean area limit of 31 µg/sq. ft

  - Chromium was detected at 9.1 µg/sq. ft, below the clean area limit of 3,094 µg/sq. ft
  - Lead was detected at 18 µg/sq. ft, exceeding the clean area limit of 10 µg/sq. ft
  - Silver was detected at 0.92 µg/sq. ft, below the clean area limit of 62 µg/sq. ft

- Workstation with phone near column E43 in the warehouse of building 105
  - Arsenic, chromium, lead, selenium, and silver were below laboratory reporting limits
  - Barium was detected at 0.93 µg/sq. ft, below the clean area limit of 3,094 µg/sq. ft
  - Cadmium was detected at 1.8 µg/sq. ft, below the clean area limit of 31 µg/sq. ft

LIMITATIONS

The scope of this assessment was limited in nature. Burns & McDonnell collected samples from a representative number of surfaces in an effort to minimize cost while providing a general overview of site conditions. Sample locations do not encompass all surfaces at the site. Additionally, samples were only analyzed for a select number of potential contaminants. Burns & McDonnell is not responsible for potential contaminants not identified in this report.

Burns & McDonnell appreciates the opportunity to work GSA on this project. Please contact us if you have any questions regarding this report or if we may be of any additional service.

Sincerely,

(b) (6)

Matt Shanahan, CHMM
Project Manager

Sample Results denoted with a “less than” (<) sign contains less than the reporting limit for each particular metal, based on a 15mL volume. The reporting limit is 0.03ug for Cadmium, 0.15ug for Arsenic, Barium, Lead and Silver, and 0.75ug for Chromium and Selenium.

The condition of the samples analyzed was acceptable upon receipt per laboratory protocol unless otherwise noted on this report. Results represent the analysis of samples submitted by the client. Unless otherwise noted, samples are reported without a dry weight correction. Sample location, description, area, volume, etc., was provided by the client. If the report does not contain the result for a field blank, it is due to the fact that the client did not include a field blank with their samples. These sample results do not reflect blank correction. This report shall not be reproduced except in full, without the written consent of Environmental Hazards Services, L.L.C. NY ELAP #11714.
