NAME OF RESOURCE: Archaeological: J&J Stiles House Site; E. Sparks House Site

Historic: numerous, see architectural discussion

ORGANIZATION CARRYING OUT SITE VISIT: USACE NYD

**DATE OF SITE VISIT:** 14 September 1995

ARCHEOLOGICAL ASSESSMENT:

SOIL TYPES: GaB: Galestown sand, 0 - 5% slopes; KmA: Klej loamy sand, 0 - 3% slopes

ESTIMATED PERCENTAGE COVERED BY BUILDINGS: 25
ESTIMATED PERCENTAGE COVERED BY PAVING: 10
ESTIMATED PERCENTAGE COVERED BY GRASS: 65

ESTIMATED PERCENTAGE COVERED BY WOODLAND/UNMANAGED LAND: 0
ESTIMATED PERCENTAGE DISTURBED (I.E. NO CHANCE OF ARCHEOLOGY): 35

ESTIMATED PERCENTAGE IN OTHER USES:

SUBSURFACE TESTING (Y/N): Y

**NUMBER OF TESTS COMPLETED: 7** 

ARCHEOLOGICAL POTENTIAL (HIGHEST VALUE ON FACILITY- NONE/LOW/HIGH): HIGH

**SUMMARY DESCRIPTION:** The potential for archaeological sites pre-dating the military use of the Sievers-Sandberg property is high. Additional historic research should be conducted on the J&J Stiles and E. Sparks properties by a qualified historian or archaeologist. Subsurface testing may also be necessary. The facility as a whole may be eligible for the New Jersey State and National Register of Historic Places under several criteria. A more comprehensive study of the facility must be undertaken to determine its significance. Archaeological remains associated with the military history must also be considered if the facility is determined eligible.

Pedricktown, New Jersey

COUNTY:

Salem

#### PREHISTORIC BACKGROUND:

Four prehistoric archaeological sites were documented just over one half mile from the Sievers-Sandberg facility on the Delaware River shoreline (Sites 28-Gl-45, 28-Gl-46, 28-Gl-71 and 28-Gl-78), but no sites have been recorded in the facility's immediate vicinity or on the property itself. Archaeological investigations at Sites 28-Gl-45 and 28-Gl-46 found that both sites were very disturbed by modern construction activities (Kardas and Larrabee 1982). A sensitivity analysis for the Delaware River conducted in 1979 indicated that the river in the USARC vicinity possessed a low archaeological sensitivity (Kern and Claggett 1979). This survey, however, focused on the river shoreline and not the upland areas on which the USARC is located. A dense concentration of Native American archaeological sites line both banks of Oldmans Creek and its adjacent wetlands. The Creek is approximately two miles northeast of the facility. The USARC property is moderately sensitive for prehistoric resources based on its topographic location on high ground above a wetland environment and on its proximity to other known sites.

#### HISTORIC BACKGROUND:

In the 17th century Oldman's Creek served as a conduit for Swedish settlers to reach inland areas although actual European settlement in the Pedricktown vicinity did not begin until the fourth decade of the 18th-century. At that time extensive channelization and drainage work was undertaken to reclaim the meadowlands along the Delaware River and it tributaries. Agriculture was the predominate industry in the area from its initial settlement to the years following World War II when light industry was established (Kardas and Larrabee 1982; Heite and Heite 1986; WAPORA 1987).

The Sievers-Sandberg vicinity was occupied since at least the first half of the 19th-century although the USARC facility itself does not appear to have had any structures at that time. A road, present by 1849, ran from what is currently NJ Route 130 to the river and this road alignment seems to have been later incorporated into South Avenue (Stansbie, Keily and Rea 1849). By 1876 two dwellings were located on the USARC property, the J&J Stiles property along Route 130 and the E. Sparks property near what became South Avenue (Everts & Stewart 1876). A "residence" is depicted in what is approximately the location of the Sparks property in the former "shops area" on a 1942 map of the Army facility (United States Army 1942). This structure, no longer standing, may have been a reuse of the earlier dwelling but further research is necessary. Other structures, located nearer the Delaware River, were depicted on the historic maps but these sites appear to be under the U.S. Army Corps of Engineers dredge material stockpile.

The United States government acquired 1500 acres of land in 1918 to form the Delaware Ordnance Depot. This facility manufactured and shipped ammunition for both World Wars and the Korean Conflict. The facility became a Nike missile site in 1960 and became known as the Philadelphia Air Defense Site. All but 120 acres of the property was transferred to the U.S. Army Corps of Engineers in 1963 and since then the property has been further divided to bring it to its present 72 acres. The U.S. Army Reserve has been quartered at the property since 1965 (Real Estate Files [Seivers-Sandberg] n.d.).

The nearest structure listed on the National Register of Historic Places is Penns Grove Boro Hall which is located over one mile southwest of the USARC facility.

#### **SUBSURFACE TESTING:**

South Avenue, possibly a 19th-century road alignment, has for the most part been abandoned and is used for parking. Grass covers most of the former roadway but the alignment is demarcated by rows of sycamore trees. West of the former roadway and its intersection with West Road, near the sewage plant, is a roughly square area, that is not maintained. This area may indicate the site of a former structure. A more detailed inspection of this location was not possible as the area was fenced and the gate locked.

A total of seven shovel tests were excavated at the Sievers-Sandberg USARC. Shovel test 1 was located in large grass covered area known as "military vehicle parking." An undisturbed soil profile was documented in this test. brown sand root mat was found to overlie a mottled yellowish-brown sand which in turn was underlain by a yellowish brown sand subsoil. Coal and ceramic pipe fragments were recovered from this test and discarded in the field.

Shovel test 2 was located in what was the former "shops area" of the Delaware Ordnance Depot. Several railroad sidings serving the shops ran through this area. The upper 8 inches of this test consisted of black to very dark grey sand with coal and clinker. A 1917 dime, 22 calibre blanks, one nail and two fragments of clear bottle glass were recovered from ST2. Subsoil, encountered at 8 inches below surface, was a dark yellowish brown sand. Tests 3 and 4 were located in the large grass covered field surrounding the helipad. In both tests a root mat was found to overlie a very compact and very dry brownish yellow sand subsoil. Modern materials were found in the root mat and were discarded in the field.

Shovel tests 5, 6 and 7 were located towards the southern end of the Sievers-Sandberg facility. ST5 exhibited an undisturbed soil profile consisting of root mat over 7 inches of brown sand which in turn overlay very pale brown fine sand. Two cut nails and one fragment of clear curved glass were recovered from this test and were discarded in the field. Underlying the root mat in tests 6 and 7 was a layer of light yellow brown to brown sand containing a dense concentration of pebbles and cobbles. This material could not be penetrated in ST6 but in ST7 this stratum was underlain by a brownish yellow compact sand. Two fragments of clear curved glass were found in ST6 but were discarded in the field.

#### **ASSESSMENT AND RECOMMENDATIONS:**

The potential for archaeological sites pre-dating the military use of the Sievers-Sandberg property is high. Additional historic research should be conducted on the J&J Stiles and E. Sparks properties by a qualified historian or archaeologist. Subsurface testing may also be necessary. The facility as a whole may be eligible for the New Jersey State and National Register of Historic Places under several criteria. A more comprehensive study of the facility must be undertaken to determine its significance. Archaeological remains associated with the military history must also be considered if the facility is determined eligible.

### **Shovel Test (ST) Profiles**

Stratum	Depth (below surface)	Soil Description	Cultural Materials
<b>ST1</b> 1.	0 - 3"	10YR 4/3 (brown) sand - root mat	
2.	3 - 11"	10YR 5/4 (yellowish brown) sand mottled w/ 10YR 5/6 sand	ceramic pipe fragments*; coal*
3.	11 - 24"	10YR 5/4 (yellowish brown) sand

#### **ENVIRONMENTAL SETTING**

The Sievers-Sandberg United States Army Reserve Center (USARC) is located within the Pedricktown Support Facility, an 85-acre site owned by Fort Dix. The Reserve utilizes 17 of the Facility's 56 structures; the remaining are either vacant or deteriorated beyond use. The site is located on U.S. Route 130, 2 miles north of the town of Penns Grove, near Exit 4 of Interstate 295. The site's southeastern boundary runs along Route 130 for approximately 1 mile, and the Facility's main entrance is from this thoroughfare. The site is bordered on the northwest (its rear) by marshy berms and wetlands along the Delaware River; its northeastern and southwestern boundaries face wetlands and open fields. (See Figure 1: General Location Map.)

The Pedricktown Support Facility's 56 structures are grouped according to building type, as a result of its planned development over time—i.e., a housing area is placed at the front of the site, and a shop/maintenance area and a missile-related area share the rear of the site. There is a network of named streets and some sidewalks connecting the areas and buildings, small paved parking areas throughout, and a large unpaved vehicle storage area at the southwest border. Much of the land is grassy lawn and/or field. A few trees are found in the shop/missile area; the housing area has a number of large trees and remnants of original landscaping. (See Figure 2: Aerial View of Site and Vicinity; Figure 3: Site Plan.)

The Pedricktown Support Facility has a long and varied history as the site of military activity. The Facility's current configuration gives tangible evidence of each piece of that history, and the site as a whole—while greatly reduced from its original size—conveys a strong sense of its past.

#### BACKGROUND RESEARCH

#### **DELAWARE ORDNANCE DEPOT PERIOD (1918-1958)**

In 1918, under the provision of the Food & Fuel Act of 1917, a 1,532-acre reservation on the Delaware River was acquired and established as the Delaware Ordnance Depot. Title to the land was settled in 1923, 1924, 1929, and by condemnation in 1932.

Historic maps of the site indicate completed construction of a large-scale munitions storage and transport operation by 1923. More than 20 miles of rail lines on-site led from a large wood pier on the Delaware River to two connections with the West Jersey & Seashore Railroad, with a spur to each of the Depot's 93 ammunition magazines. A 1923 map shows more than 40 additional structures, including Officers' and Enlisted Men's Quarters, carpenter and machine shops, blacksmith shop, stables, truck and engine sheds, and administration buildings. At this time, the skeleton of the site's arrangement into three functional areas can be seen. Three buildings remain from the site's earliest period: No. 184, historically a Garage/Training Auditorium, 1918; No. 120, historically Commissioned Officers' Quarters, 1918; and No. 197, a detached garage, 1919.

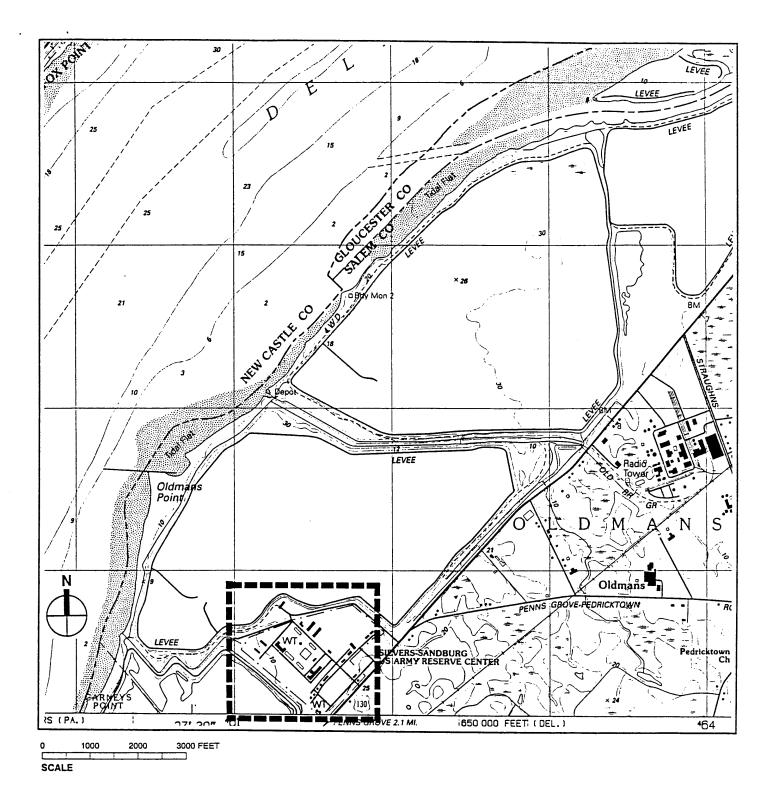

Figure 1

General Location Map Sievers-Sandberg USARC Pedricktown, Salem County, NJ United States Geological Survey - 1993 Marcus Hook, PA-NJ-DEL Quadrangle

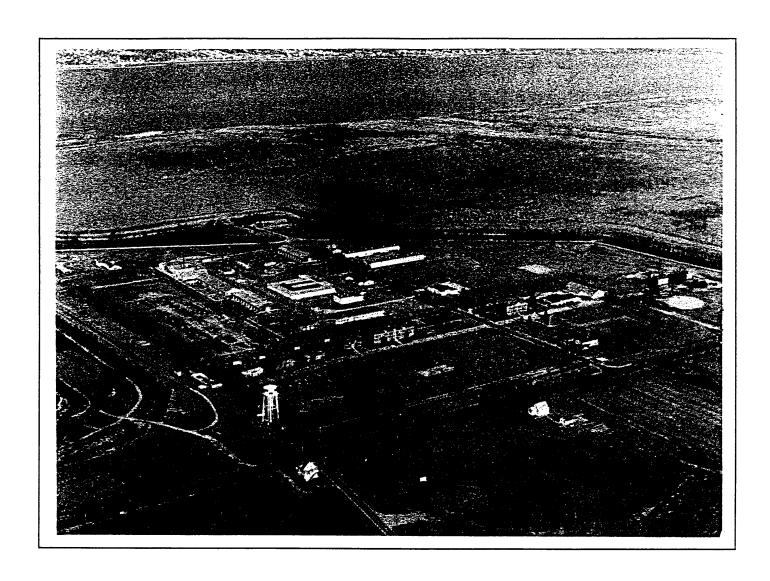

Figure 2

Aerial View of Site and Vicinity
Sievers-Sandberg USARC
Pedricktown, Salem County, NJ

No. 184 is a long one-story tile and brick building with a small wooden addition built sometime between 1923 and 1941. Building 120, a gabled two-story frame house, is distinguished by an L-shaped porch. No. 197 is a double-width garage with a pair of large sliding wooden doors.

By 1942, the Depot had expanded its operations from 93 magazines (storing standard ammunition, smokeless powder, and primer and fuse munitions) to include high-explosive underground igloo storage, for a total of 145 storage magazines. During this period, some rail lines were added, a new Depot Pier was built north of the older pier, and the site's three building Areas were well-defined and developed. The 1939 WPA Guide to 1930's New Jersey described the Delaware Ordnance Depot as "a typical Army reservation in neatness and landscaping." 1

The Depot's three building areas included a Housing/Barracks Area, located across the front of the site; a Shops Area, located in the middle of the site; and a Loading Area, located near the River at the site of the unused wooden pier.

#### HOUSING/BARRACKS AREA

The majority of the Housing/Barracks Area was constructed in the late 1930's. By 1942, there were 41 structures in this area. They ranged from Officers' and Family Housing and Enlisted Men's Barracks to amenities such as a dispensary, officers clubs, and recreational facilities. There were a few buildings dating from the Depot's establishment, but the majority were built during the late 1930's and early 1940's; 18 structures from this period survive in the Housing/Barracks Area.

The houses, detached garages, and the barracks buildings of this period are of Neo-Georgian design. The houses (Buildings 177, 179, and 276-278) are two-story red brick buildings with minimal but handsome detailing, such as tabernacle door frames, some ornamental brick lintels, and slate roofs—gabled and hipped. The detached garages (including Buildings 285-288), for the most part, match the houses; they are also red brick with hipped, slate roofs. The Enlisted Men's Barracks (Building 273), originally built with two verandas on each end, is a large two-story red-brick structure, with some decorative architectural details, such as stone pilasters, string courses, and door frames.

These buildings were laid out to form a kind of "neighborhood" on the front portion of the site. The Commissioned Officers' Quarters are located on one end, and the Non-Commissioned Officers' Quarters along with an Enlisted Men's Barracks were placed on the opposite end; sidewalks, street lighting, landscaping, a swimming pool, tennis court, and Officers' Club all contributed to a formal setting. This approach was common to Army Posts built during this era, when city planning principles were being adapted to military housing design. A 1937 article in *The Federal Architect* outlines the practical and conceptual considerations taken by the Army in providing on-Post housing across the county. For example, detached housing for officers was provided whenever possible, planned community amenities were customary, and consideration of local character was taken in choosing an architectural style and materials for Army housing. The Army adapted the Colonial and Early Federal styles for Posts along the Eastern Seaboard, New England, and the Middle Atlantic states.<sup>2</sup>

Federal Writers Project of the Works Program Administration for the State of New Jersey, *The WPA Guide to 1930's New Jersey* (New York: Viking Press, 1939; reprint ed., New Brunswick and London: Rutgers University Press, 1989), p. 578.

<sup>2</sup> L.M. Leisenring, "Quarters for the Army," in *The Federal Architect*, July 1937, Vol. 8, pgs. 15-25, 42, 44.

The southwestern corner of the Housing/Barracks area contains a number of structures related to water supply and storage. The most prominent among them is No. 239, an elevated water storage tank built by the Chicago Bridge and Iron Works in 1932. The water tank, which rises on steel legs to a height of 95 feet, has a capacity of 100,000 gallons. Another nearby water tank, No. 249, is a drum-shaped steel reservoir dating from 1942. In the same area as the water storage tanks are two small sheds known as Buildings 229 and 229A, one-story frame structures built in 1932 and 1986 that house water pressure and pumping equipment.

Also in the southwest corner of the base is a complex of several related structures: No. 269, the Bath House, 1944; No. 279, Lavatory Building, 1941; No. 289, the Swimming Pool, 1932; No. 299, the Wading Pool, 1954; and No. 298, the Chlorinator Building, 1964. Collectively, these structures formed a recreational swim area for personnel and families residing in the Barracks/Housing Area, including bathing and bathroom facilities. No. 269 is a one-story hollow tile building that formerly served as a showering area for those using the pool. Building 298 is a concrete shed that housed the filtration equipment and chemicals used for the pool.

#### SHOPS AREA

By 1942, the Shops Area had expanded to 43 structures, including maintenance and repair shops, warehouses and storage sheds, a firehouse and roundhouse, carpenter, paint, and electrical shops, stables, and a magazine surveillance office. Twelve buildings survive from this period in the Shops Area; they are typically utilitarian in design and construction. The 1942 site map shows a Works Progress Administration (WPA) office and a WPA lunchroom in the Shops Area, and site "histories" found in the Fort Dix Real Property Office files report WPA construction in 1939. The refined proportions, choice of materials, and thoughtful site planning in this area indicate that some of the buildings could have been constructed as part of a WPA project.<sup>3</sup> Regardless, the Shops Area structures contribute to the overall integrity of the site.

Buildings in the Shops Area from this period include: No. 380, Exchange Main Retail, 1938; No. 474, Field Engineer Facility, 1934; No. 494, Field Engineer Facility, 1934; No.485, Heat Plant Building, 1935; No. 495, Field Engineer Maintenance Shop, 1934; No. 475, Lavatory Building, 1941; No. 434, Field Engineer Storehouse, 1942; No, 480, General Purpose Warehouse, 1942, No. 404, General Storehouse, 1942; No. 440, Consolidated Mess Hall, 1945; and No. 464, General Storehouse, 1934.

Building 380 is a vacant one-story, L-shaped structure that formerly served as the Post Exchange (PX). Its whitewashed concrete block exterior is in disrepair, and many of the windows have been boarded up. In 1960, Building 380 was renovated to include a barber shop, snack bar, cleaners, and retail sales area.

Buildings 474, 485, 494, and 495 are located in the northwestern part of the Shops Area, and are connected to each other by a set of three enclosed breezeways. Buildings 474 and 495 were constructed at the same time, and are similar in materials, design, and appearance. They are both one-story hollow tile and brick construction, with large multipane metal windows, garage door openings, and gabled roofs. No. 485 serves as the Heat Plant Building and is also a one-story brick and tile structure, although somewhat smaller in size than Nos. 474 and 495. No. 494 is a symmetrical

Although undocumented, site "histories" found in the Fort Dix Real Property files on the Pedricktown site state that the WPA constructed a number of buildings on the site in the late 1930's, but do not indicate which areas or structures.

arrangement of a central garage door opening flanked by two metal windows on the southwest facade. No. 475 is a one-story tile and brick lavatory that formerly served those working in the Shops Area.

Buildings 434 and 480, constructed in 1942, are the same type of building; a long one-story rectangular warehouse with an elevated concrete loading platform. Both of the brick buildings have 10 loading bays, with modest corbeling details above some of the openings.

Building 404 is the second largest building at Pedricktown, with more than 22,000 square feet of space. The large brick structure is generally divided into three sections, reflecting its original use as the post firehouse, train roundhouse, and automotive garage. The western end of the building is a two-part arrangement of administrative and garage space that housed the base's fire protection services and equipment; the one-story office area has 1/1 replacement windows, while the slightly taller fire garage has three vehicular openings flanked by two round windows. Farther east, at the center of the building, is the former roundhouse, where trains were serviced, repaired, and maintained. The roundhouse was linked to an extensive system of rail lines and spurs to the magazine area, inland railways, and shipping depot at the river's edge. Finally, the eastern portion of Building 404 consists of 16 vehicular bays that continue to serve as the base's repair garage, permitting easy entry of trucks, cars, and other vehicles for servicing.

The Consolidated Mess Hall, Building 440, is a one-story concrete block structure built in 1945 and located at the center of the Sievers-Sandberg USARC. The building is in disrepair.

#### LOADING AREA

By 1942, the Loading Area contained 44 structures used for assembling, packing, and loading the munitions, such as melt buildings, pouring and assembling buildings, magazine service buildings, an explosive drying and storage building, transformer shelters, a sandblast shop, surveillance offices, and bombproof shelters. No buildings survive from this area of the site; it is no longer within the boundaries of the Pedricktown Support Facility. Remains from some of the structures are purported to have been covered with silt from dredging operations along the Delaware River during the last 20 to 30 years.

Following World War II, the Delaware Ordnance Depot became a sub-Depot of the Raritan Arsenal near Edison, New Jersey, and served as back-up storage for Picatinny Arsenal in northern New Jersey, Frankford Arsenal in Philadelphia, and Aberdeen Proving Ground in Maryland. In 1958, the site ceased functioning as an ordnance depot; the munitions were removed, and it was renamed the Delaware Storage Activity.

#### DELAWARE STORAGE ACTIVITY/PHILADELPHIA AIR DEFENSE SITE (1959-1965)

The next wave of building and activity came during the late 1950's and early 1960's, when the site came under the command of the Headquarters, 3rd Battalion (Hercules) 43rd Air Defense Artillery, and was renamed the Philadelphia Air Defense Site in 1958. As the Philadelphia Air Defense Site, the Pedricktown site became the command center for the NIKE Missile sites that encircled metropolitan Philadelphia. It was occupied by both U.S. Artillery and Air Force Radar units.

The designation of the Pedricktown installation as the Philadelphia Air Defense Site brought new construction activity and additional personnel to the base. The years 1959 to 1962 witnessed the construction of several buildings, including the Missile Master/Anti-Aircraft Operations Center (Building 432), and associated buildings—Enlisted Barracks (Buildings 351 and 371), Officers' Open Mess (Building 173), and NCO Open Mess (Building 1961).

Built in 1951, Building 432 served as the central command center for the system of NIKE Hercules Missiles that provided air defense for nearby Philadelphia. The building was based on a set of standard plans by the engineering firm of Ammann & Whitney, modified slightly to suit the specific needs of the Pedricktown site. Its construction and design reflect the distinctive function and importance of the building as an integral part of the Cold War American arsenal. The Missile Master compound, including backup power generators (No. 422) and emergency water storage (No. 461), was designed to be a self-contained facility during and after an enemy attack. The roof, walls, and foundation of the Missile Master are steel-reinforced concrete, designed to withstand tremendous forces resulting from a blast; the windowless structure has a 1-foot-thick roof and 1-foot 4-inch walls. The enormous heating, ventilation, and air conditioning (HVAC) systems are still largely intact. Enough emergency rations were kept on hand to sustain 130 personnel for 30 days. Retractable berths, cotlike beds made of canvas stretched over a steel frame, were attached to the corridor walls and could be swung down to provide emergency sleeping accommodations.

The interior of the building, which is in fair-to-poor condition, contained an intricate system of tele-communications equipment, circuits, and wiring, with many underfloor conduits to carry telephone and computer cables. The Anti-Aircraft Operations Room (AAOR), nicknamed the "Blue Room," was the central activity area within the Missile Master. An open theater-like arena, the AAOR once contained the tactical display equipment and staff that directed air defense for the assigned area (see Figure 46). Adjacent to the AAOR are the Defense Commander's Office and Staff Room, both of which have windows looking out over the AAOR (see Figure 47). From these rooms, the Defense Commander and his staff could observe the status of tactical defense conditions, and make decisions in relative privacy. Another room in the Missile Master is the Decontamination Area, used as a "hot" entrance where personnel, during conditions of nuclear fallout, would enter the building and discard contaminated clothing before going into a shower area, where decontamination would take place. Fresh clothing was kept in store, and the decontamination area was ventilated by a special filtration and exhaust system that remained separate from the general HVAC to prevent air contamination throughout the building. Other rooms in the building served as storage, equipment, and power rooms, with numerous redundancies to back up energy, machinery, and electronics systems.

Fort Dix took command of the Pedricktown site from the Defense Supply Agency in 1962, and in 1965, due to restructuring of defense installations, missile-related activities moved from the Pedricktown site.

#### U.S. ARMY RESERVE (1965 TO PRESENT)

Following the transfer of command to Fort Dix and subsequent use of the site by the U.S. Army Reserve, a series of site-disposal actions began. In the early 1960's, 1,412 acres—the vast majority of the land that comprised the original 1,532-acre site—was transferred to the Army Corps of Engineers, Philadelphia District, and has since been used for depositing silt from dredging operations along the Delaware River. In 1975, 20 acres of the site (located across Route 130) were donated to Oldman Township, and 11 acres were donated to Salem County.

The site was designated the Pedricktown Support Facility in 1969. At the same time its use by the active Army was phased out in the early 1970's, its use by the Army Reserve increased. In 1972,

<sup>4</sup> Real Property files on the Pedricktown site indicate that there is no official record of this transfer.

Building No. 273 was dedicated the Sievers-Sandberg United States Army Reserve Center,<sup>5</sup> and in 1985, construction of a new ARC was approved, but was never realized. Today the Army Reserve is the sole tenant, serving 1,100 Reservists from six units.<sup>6</sup>

### **SURVEY RESULTS**

Fifty-six buildings and structures were surveyed at the Pedricktown Support Facility. <sup>7</sup> They are:

- No. 100, Sentry Station, 1941 (see Figure 4)
- No. 120, Family Housing, 1918 (see Figure 5)
- No. 130, Detached Garage, 1934 (see Figure 6)
- No. 171, Army Reserve Center, 1942 (see Figure 7)
- No. 173, Officers' Open Mess, 1961 (see Figure 8)
- No. 177, Family Housing, 1940 (see Figure 9)
- No. 179, Family Housing, 1940 (see Figure 10)
- No. 184, Motor Repair Shop, 1918 (see Figure 11)
- No. 188, Detached Garage, 1951 (see Figure 12)
- No. 190, Sentry Station, 1942 (see Figure 13)
- No. 197, Detached Garage, 1919 (see Figure 14)
- No. 229, Booster Pump House, 1932 (see Figure 15)
- No. 229A, Water Pump Station Building, 1986 (see Figure 16)
- No. 233, Tennis Court, 1930 (see Figure 17)
- No. 239, Elevated Water Storage Tank, 1932 (see Figure 18)
- No. 249, Water Tank, 1942 (see Figure 19)
- No. 269, Bath House, 1944 (see Figure 20)
- No. 273, Enlisted Barracks, 1939 (see Figure 21)
- No. 274, Dispensary, 1939 (see Figure 22)
- No. 276, Family Housing, 1939 (see Figure 23)
- No. 277, Family Housing, 1939 (see Figure 24)
- No. 278, Family Housing, 1939 (see Figure 25)
- No. 279, Lavatory, 1941 (see Figure 26)
- No. 285, Detached Garage, 1941 (see Figure 27)
- No. 286, Detached Garage, 1941 (see Figure 28)
- No. 287, Detached Garage, 1941 (see Figure 29)
- No. 288, Detached Garage, 1941 (see Figure 30)
- No. 289, Swimming Pool, 1932 (see Figure 31)
- No. 298, Chlorinator Building, 1964 (see Figure 32)
- No. 299, Wading Pool, 1954 (see Figure 33)
- No. 315, Helicopter Pad, 1960 (see Figure 34)
- No. 322, Post Exchange, 1961 (see Figure 35)

Documentation on why the Center was dedicated to these two soldiers has not been found, although the dedication date is referred to in a number of miscellaneous documents in the Real Property files held at Fort Dix

<sup>6</sup> Fort Dix Installation Commander's Annual Real Property Utilization Survey as of 31 December 1994, Table J-3, p. 171.

The Army Corps. of Engineers site map provided for the Sievers-Sandberg USARC survey listed 57 structures, but one of these—Building 268—no longer exists on-site.

- No. 351, Enlisted Barracks, 1961 (see Figure 36)
- No. 371, Enlisted Barracks, 1961 (see Figure 37)
- No. 380, Exchange Main Retail, 1938 (see Figure 38)
- No. 404, General Storehouse, 1942 (see Figures 39 and 40)
- No. 413, Gas Station, 1931 (see Figure 41)
- No. 421, Sentry Station, 1969 (see Figure 42)
- No. 422, Electric Power Plant, 1960 (see Figure 43)
- No. 432, Missile Master Command Center/Anti-Aircraft Operation Center, 1959 (see Figures 44 through 47)
- No. 434, Field Engineer Storehouse, 1942 (see Figure 48)
- No. 440, Consolidated Mess Hall, 1945 (see Figure 49)
- No. 452, Water Pump House, 1969 (see Figure 50)
- No. 461, Water Tank, 1964 (see Figure 51)
- No. 464, General Storehouse, 1951 (see Figure 52)
- No. 471, Open Storage Area, 1964 (see Figure 53)
- No. 473, Field Engineer Facility, 1937 (see Figure 54)
- No. 474, Field Engineer Facility, 1934 (see Figure 55)
- No. 475, Lavatory, 1941 (see Figure 56)
- No. 480, General Purpose Warehouse, 1942 (see Figure 57)
- No. 484, Field Engineer Storehouse, 1932 (see Figure 58)
- No. 485, Heat Plant Building, 1935 (see Figure 59)
- No. 494, Field Engineer Facility, 1937 (see Figure 60)
- No. 495, Field Engineer Maintenance Shop, 1934 (see Figure 61)
- No. 506, Field Engineer Storehouse, 1935 (see Figure 62)
- No. 530, Sewage Plant, 1975 (see Figure 63)

A detailed architectural description of each building is included in the Individual Structure Survey Forms found in Appendix D.

Most of the original buildings of the Housing/Barracks Area remain, and the Area as a whole retains a clear sense of plan and community. The buildings are in fair-to-good condition and have recently undergone lead abatement and asbestos removal. Most of the large buildings from the 1930's to 1940's Shops Area remain. Those in use by USARC are in fair to good condition. The Missile Master-related buildings in the Shop Area are all vacant; for the most part, they are in poor condition, and a few are near ruin.

#### RECOMMENDATIONS

Three structures at the Pedricktown Support Facility date from 1918, when the site was established as a military reservation. Thirty-six structures date from the 1930's to mid-1940's, the period of most construction and military activity. Sixteen date from the Cold War period. One utility structure was constructed in the 1980's. While a number of buildings have been demolished over the years, and several of the survivors are in poor condition, the site as a whole, in its concentrated assemblage of diverse buildings, exerts a strong historical presence.

Staff at the Sievers-Sandberg USARC reported that the hazardous material remediation work recently completed on many of the Housing Area buildings is a precursor to demolition rather than restoration or rehabilitation.

Recommendations regarding this site fall within two of the three categories of potential significance, as defined by this report: 2) Weapons-Related Structures, whose significance is both architectural and associative, in line with the themes suggested by the Legacy Cold War Project; and 3) Historic Military Installations, whose significance is related to their association with periods of military activity that predate and/or served as support to the Cold War military build-up.

#### WEAPONS-RELATED STRUCTURES

Building 432, the 1959 Missile Master/Anti-Aircraft Command Center, is potentially significant and may be eligible for listing on the New Jersey and National Registers of Historic Places. It is representative of an unusual building type, whose construction was distinctive to a specialized war function. That function had a very short life span, and is thus firmly associated with a critical period of military and American history. The Missile Master may meet both National Register Criterion A: Association, with events significant in the broad patterns of American history and Criterion C: Design/Construction. The building was evaluated within the historic contexts of the Army Reserve, the Cold War, and general American military history.

The Missile Master represents a state-of-the-art Cold War facility and the building has clear and substantive association with the Cold War era. The NIKE-Hercules Missile (MIM-14) became fully operational in 1958 and was an improvement over its predecessor, the NIKE-Ajax Missile. The Missile Master, erected in 1959, was designed as a war bunker from which tactical command of remote NIKE Hercules missile sites could be maintained, even under grave conditions of war and nuclear fallout. Its responsibility for defense of a major U.S. city, Philadelphia, further enhances its importance as a military facility of the Cold War period. The Missile Master began its emergence into obsolescence almost immediately after it was completed, and was fully operational for less than six years.

The design features incorporated in the Missile Master may make it eligible under Criterion C. The architecture and arrangement of the building's components were intended to create a secure environment for "war room" operations. The very specific requirements necessary to achieve such an environment resulted in a heavily fortified, windowless structure of reinforced concrete. The Anti-Aircraft Operations Room, Defense Commander's Office and Staff Room, and Decontamination Area are distinctive elements unique to this type of building. Furthermore, the unusual functions of the building's rooms are evidenced in their layout and arrangement.

It is recommended that more research be conducted on this building and on the Cold War context with which it is associated. As this building is less than 50 years old, National Register criteria require distinct justification for "exceptional" importance. Because of the increased concern by the Department of Defense for the documentation and evaluation of Cold War sites, the "50-year" criterion is considered less of an obstacle to the significance of the structures, sites, and objects associated with the Cold War. That period of history, however recent, is generally agreed to be "unquestionably of exceptional importance in our Nation's history."

The following topics may merit further research:

- The history of the NIKE missile program in national and regional military strategy;
- The role and status of the Pedricktown site in the national and regional network of anti-aircraft missile sites; and

<sup>9</sup> Coming in from the Cold, p. 61.

 A comparison of the architectural, technological, and contextual features of this Missile Master building, as compared with similar buildings in the region and nation.

#### HISTORIC MILITARY INSTALLATIONS

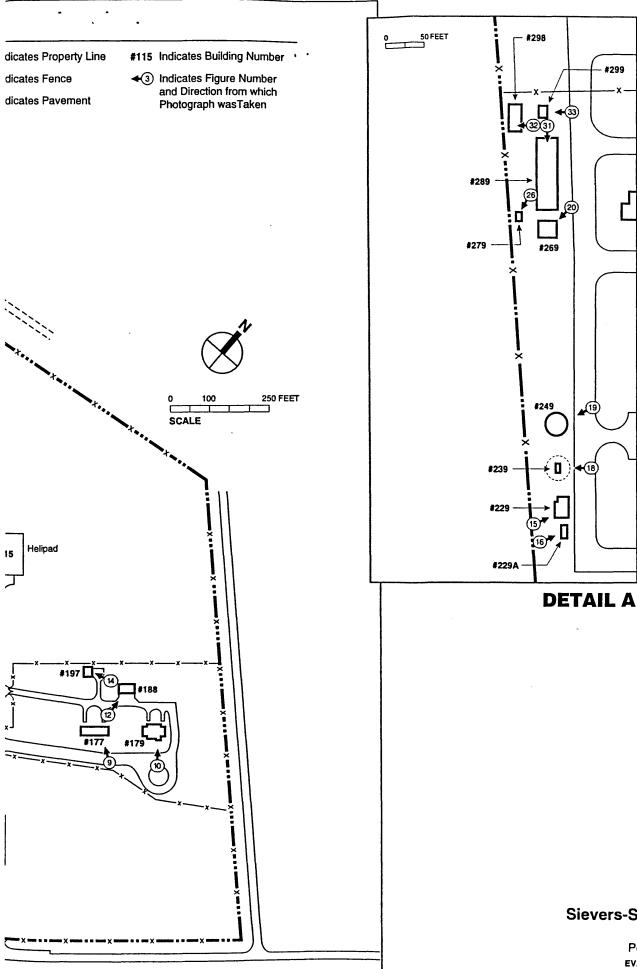

The Pedricktown Support Facility (a.k.a. Sievers-Sandberg USARC) is potentially eligible for listing on the New Jersey and National Register of Historic Places, as either a historic district or as part of a multiple resource nomination. It should be noted that, with the exception of the Missile Master (Building 432), none of the buildings at the Pedricktown site are recommended as individually eligible for the New Jersey State or National Registers.

The site's 77-year history as a nearly continual active installation of one kind or another places it prominently within state, regional, and national military history contexts. In all eras of its activity, this site played a role in the larger military complex of the northeast region and the nation. Its location is a strong factor in the site's significance. As the Delaware Ordnance Depot, it was strategically sited for transporting munitions by water, rail, and road, and served as a member of a larger network of regional arsenals. As the Philadelphia Air Defense Site, its mission to protect metropolitan Philadelphia from air strikes places it within a larger network of NIKE missile sites throughout the northeast corridor. In these two critical periods of U.S. military history, the Pedricktown site was a significant player.

The site may meet National Register Criterion A: Association, and/or Criterion C: Design/Construction. With physical evidence from each period of its military history intact, the Pedricktown Support Facility has integrity of location, design, setting, materials, feeling, and association. It also may be eligible under Criterion D: Information Potential, which usually relates to archaeological sites, but in this case relates to the old magazine and Loading Areas of the pre-1960's site.

It is recommended that a more comprehensive study be conducted on this site and its state and national contexts before a definitive determination of significance can be made. The following topics may merit further research:

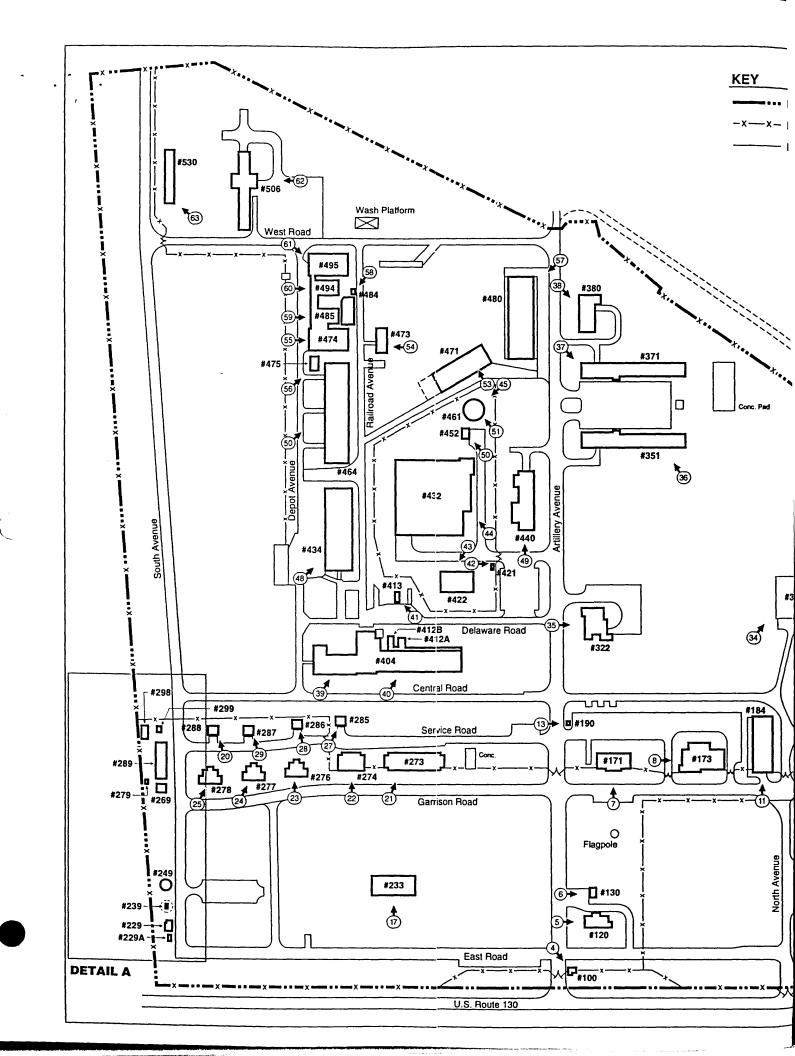

- Comparison of the Pedricktown site, i.e., its plan, design. and current configuration, with other military installations in the region. The comparison would help locate this site as an unusual, rare, or common example of its type.
- The role of this site in the national and regional military strategy in each period of its history, i.e., World War I, the 1930's/WPA period, World War II, the Cold War, and as a major Army Reserve site.
- The significance or insignificance of its location in each period of its history.

Concrete

Exterior Wall Fabric:

Brick

Fenestration:

Multi-pane steel windows.

Roofs/Chimneys:

The low-pitched hipped roof is covered with corrugated metal roofing.

Additional Architectural Descriptions:

The sentry station is the latest of several gatehouse structures to occupy the site adjacent to the main entrance to the Sievers-Sandberg base. The broad hipped roof creates large eaves that shelter the building from the elements and ensure maximum visibility from within. In style and function, it relates to Building 190, constructed at the same time.

Fenestration:

A mix of window types and sizes are found on Building 173, including an expansive set of tinted

windows that incorporates three pairs of glass doors on the north elevation.

Roofs/Chimneys:

Low-pitch, built-up roof.

Additional Architectural Descriptions:

The construction of Building 173 was part of the major capital improvements that took place in the early 1960's. During that time, Buildings 173, 322, 351, and 371 were constructed, adding more than 50,000 square feet of interior space. Original plans for the Officers' Mess included a barroom, lounge, and dining room. The building appears relatively unchanged from its original exterior appearance.

Foundation:

Concrete

Exterior Wall Fabric:

Brick, common bond.

Fenestration:

Double-hung 4/4, stone sills.

Roofs/Chimneys:

Shingled hipped roof. Interior brick chimney.

Additional Architectural Descriptions:

The house is composed of a central rectangular block with a full-height wing extending to the southwest. At the top of a small concrete porch is a triangular pedimented door surround. The original door appears to have been replaced with a wooden door with a single diamond light. At the rear or the building is a small pedimented entryway.

Building 179 was built during a flurry of housing construction at the base in 1939-1940. In addition to Building 179, this period saw the addition of Buildings 177, 276, 277, 278, and 273.

Exterior Wall Fabric:

Hollow tile and brick, stuccoed

Fenestration:

Multi-pane divided lights on northeast facade; set of three six-pane windows above southeast

entrance. Garage door on northwest end of building.

Roofs/Chimneys:

Medium-pitch gable with asphalt shingles, wood trusses. Square brick chimney (interior) toward

southeast end.

Additional Architectural Descriptions:

The southeast facade of Building 184 has a steel double door slightly offset from center, with an additional doorway to the southwest. Above the double doors are a small pent roof, a set of windows, and a large ventilation louver. The northeast facade is articulated by a series of seven multi-pane clerestory windows, and the northwest facade contains an operational vehicular opening, steel door, and a ventilation louver similar to that found at the opposite end of the building. A shed-like wooden addition, which extends the building's roofline, was constructed on the southwest side of the building at some time between 1923 and 1941. A hothouse, formerly attached to the southwest side of the building and adjacent to the wooden addition, was removed in 1964.

Building 184 was constructed in 1918 and is one of two structures dating from the origination of the base as a military ordnance depot.

Roofs/Chimneys:

Hipped roof

Additional Architectural Descriptions:

Originally, Building 273 comprised a central barracks building flanked by open-air verandas on each floor. Sometime after 1956, these porch wings were enclosed to create additional interior space. Steel doorways, staircases, and landings have also been appended to the wings, which are set back from the main facade. A concrete stairway with iron railings leads to the main entrance on the southeast side of the building. Limestone pilasters, frieze, and crown surround a pair of steel doors, forming a decorative surround. The stonework extends above the entryway and frames a central window. A series of segmental-arched dormers articulate the hipped roof.

Foundation:

Concrete.

Exterior Wall Fabric:

Brick, common bond.

Fenestration:

6/6 double-hung, 12/12 double-hung with 6/6 sidelights.

Roofs/Chimneys:

Hipped roof central section, with two flat roofed wings. Two brick interior chimneys at each end of

the building.

Additional Architectural Descriptions:

Building 276 was constructed in 1939 to provide housing for the families of two Non-commissioned Officers (NCOs). Reflecting that use is its symmetrical arrangement and wood double porch. The building is four bays wide, with 6/6 fenestration at the second story, and a mix of 6/6 and three-part windows at the ground floor. A slightly raised porch at the center of the building provides separate entrances at each side and two 6/6 windows with raised panel spandrels. The porch is distinguished by wood cornithian pilasters. Each of the side wings is accented by a modest wood cornice.

DESCRIPTION

Construction Date:

1939

Source of Date:

Real Property Records, Fort Dix

Architect:

Unknown

Builder:

Construction Division.

Office of the Quartermaster General

Style:

Neo-Georgian

Dimensions:

Square Footage:

4,355 sf

Form Plan Type:

Number of Stories:

2 (main block), two one-story wings

Foundation:

Concrete

Exterior Wall Fabric:

Brick, common bond.

Fenestration:

6/6 double-hung, 12/12 double-hung with 6/6 sidelights.

Roofs/Chimneys:

End-gable central section, with two flat roofed wings. Two brick interior chimneys at each end of

the building.

Additional Architectural Descriptions:

Building 277 was constructed in 1939 to provide housing for the families of two Non-commissioned Officers (NCOs). Reflecting that use is its symmetrical arrangement and double porch. The building is four bays wide, with 6/6 fenestration at the second story, and a mix of 6/6 and three-part windows at the ground floor. A porch at the center of the building provides separate entrances at each side, and features elliptical arched doorways and door-like glazed panels. Each of the brick arches is accented by a limestone keystone and incorporates a stone belt course. Each of the side wings is accented by a modest wood cornice.

Foundation:

Concrete.

Exterior Wall Fabric:

Brick, common bond.

Fenestration:

6/6 double-hung, 12/12 double-hung with 6/6 sidelights.

Roofs/Chimneys:

Hipped roof central section, with two flat roofed wings. One brick interior chimney at the

northwest end of the building.

Additional Architectural Descriptions:

Building 278 was constructed in 1939 along with buildings 276 and 277 to provide housing for the families of two Noncommissioned Officers (NCOs). Reflecting that use is its symmetrical arrangement and wood double porch. The building is four bays wide, with 6/6 fenestration at the second story, and a mix of 6/6 and three-part windows at the ground floor. A slightly raised porch at the center of the building provides separate entrances at each side and two 6/6 windows with raised panel spandrels. The porch is distinguished by wood corinthian pilasters. Each of the side wings is accented by a modest wood comice. The building is nearly identical to Building 276, except for its single chimney, which was reportedly destroyed by a lightning strike.

Foundation:

Concrete and concrete block

Exterior Wall Fabric:

Concrete block

Fenestration:

1/1 double-hung sash

Roofs/Chimneys:

Built up roof, very low-pitch. Several ventilation stacks.

Additional Architectural Descriptions:

Building 322 is a one-story concrete block structure built in 1961 as a mess hall for Non-commissioned Officers (NCOs). It originally included a dining room, bar, and kitchen. It now houses the Post Exchange, a retail shop for military personnel. The exterior of the building is an uncomplicated composition of concrete block, painted white, and modest fenestration. The uneven facades of the building result in a series of recesses and protrusions. The main entrance, on the west facade, consists of a recessed pair of double doors. At the rear of the building are secondary and service entrances and two large multipane windows.

Roofs/Chimneys:

Built-up roofing, low-pitch gable. Roof-mounted ventilation equipment.

Additional Architectural Descriptions:

Building 351 is one of a pair of modest barracks (along with Building 371) for enlisted men constructed in 1961. Both of the long, rectangular buildings are vacant and badly deteriorated, with peeling paint and broken doors and windows. The two buildings are parallel to one another, with a large open space between. Building 351 is constructed of standard concrete block, with a mix of 1/1 and eight pane metal windows. In addition to the ground floor doorways on the northwest and southeast facades, there is a steel staircase and ground and second-story entrances on the southwest facade.

Fenestration:

Eight pane and paired 1/1 metal windows

Roofs/Chimneys:

Built-up roofing, low-pitch gable. Roof-mounted ventilation equipment.

Additional Architectural Descriptions:

Building 371 is one of a pair of barracks, along with 351, constructed in 1961 for enlisted personnel. Both of the long, rectangular buildings are vacant and badly deteriorated, with peeling paint and broken doors and windows. The two buildings are parallel to one another, with a large open space between. Building 371 is very modest composition of standard concrete block and a mix of 1/1 and eight pane metal windows. In addition to the ground floor doorways on the northwest and southeast facades, there is a steel staircase and ground and second-story entrances on the southwest facade.

6/6 double hung wooden sash

Roofs/Chimneys:

Gabled roof covered with asphalt composite shingle. Roof-mounted vents.

Additional Architectural Descriptions:

Building 380 is a vacant L-shaped structure that formerly served as the Post Exchange (PX). Its whitewashed concrete block exterior is in disrepair, and some of the windows have been boarded up. Small overhangs cover the two entrances on Artillery Avenue. At the rear of the building, a metal "Post Exchange" sign bears witness to the building's former use. In 1960, Building 380 was renovated to include a barber shop, cleaners, snack bar and retail sales area.

Although Real Property Records (form DA 2877) at Fort Dix indicate a construction date of 1938, historic maps of the site from 1941, and 1942 do not show building 380 in its present location.

### Additional Architectural Descriptions:

The large structure known as Building 404 is generally divided into three sections, reflecting its original use as the post firehouse, train roundhouse, and automotive garage. The western end of the building is a two-part arrangement of administrative and garage space that housed the base's fire protection services and equipment; the one-story office area has 1/1 replacement windows, while the slightly taller fire garage has three vehicular openings flanked by two round windows. Further east, at the center of the building is the former roundhouse, where trains were serviced, repaired, and maintained. Since its founding in 1918 as the Delaware Ordnance Depot, the base relied heavily on railway transportation to receive and ship materials and ordnance. The roundhouse was linked by an extensive system of rail lines and spurs to the magazine area, inland railways and shipping depot at the river's edge. Finally, the eastern portion of Building 404 comprises sixteen vehicular bays that continue to serve as the base's repair garage, permitting easy entry of trucks, cars, and other vehicles for servicing.

Additional Architectural Descriptions:

Building 422 was constructed as a power plant to provide energy for the Missile Master facility. If the conventional power grid were to fail under adverse conditions or during an enemy attack, the independent power plant housed in Building 422 would ensure that the Missile Master remained operational. Because the Missile Master relied heavily on electronic and communication equipment, a constant and reliable source of electricity was considered imperative.

SITING, BOUNDARY DESCRIPTION, AND RELATED STRUCTURES

#### Attachment A

#### ADDITIONAL ARCHITECTURAL DESCRIPTION:

Built in 1951, Building 432 served as the central command center for the system of Nike Hercules Missiles that provided air defense for nearby Philadelphia. The building was based on a set of standard plans by the engineering firm of Ammann & Whitney, modified slightly to suit the specific needs of the Pedricktown site. Its construction and design reflect the distinctive function and importance of the building as an integral part of the American Cold War arsenal. The Missile Master compound, including backup power generators (No. 422) and water storage (No. 461), was designed to be a self-contained facility during and after an enemy attack. The roof, walls, and foundation of the Missile Master are steel-reinforced concrete designed to withstand tremendous forces resulting from a blast: the windowless structure has a 1-foot-thick roof and 1-foot 4-inch walls. The enormous heating, ventilation, and air conditioning (HVAC) systems are still largely intact. Enough emergency rations were kept on hand to sustain 130 personnel for 30 days. Retractable berths, cot-like beds made of canvas stretched over a steel frame, were attached to the corridor walls and could be swung down to provide emergency sleeping accommodations.

The interior of the building, which is in fair-to-poor condition, contained an intricate system of telecommunications equipment, circuits, and wiring, with many underfloor conduits to carry telephone and electronics cables. The Anti-Aircraft Operations Room (AAOR), nicknamed the "Blue Room," was the central activity area within the Missile Master. An open theater-like arena, the AAOR once contained the tactical display equipment and staff that directed air defense for the assigned area. Adjacent to the AAOR are the Defense Commander's Office and Staff Room, both of which have windows looking out over the AAOR. From these rooms, the Defense Commander and his staff could observe the status of tactical defense conditions and make decisions in relative privacy. Another room in the Missile Master is the Decontamination Area, used as a "hot" entrance where personnel, during conditions of nuclear fallout, would enter the building and discard contaminated clothing before going into a shower area, where decontamination would take place. Fresh clothing was kept in store, and the decontamination area was ventilated by a special filtration and exhaust system that remained separate from the general HVAC to prevent air contamination throughout the building. Other rooms in the building served as storage, equipment, and power rooms, with numerous redundancies to back up energy, machinery, and electronics systems.

6/6 double-hung and six-pane divided lights.

Roofs/Chimneys:

Low-pitch gable, covered with asphalt roofing material. Square brick chimney at the northwest end

of the building.

Additional Architectural Descriptions:

The Consolidated Mess Hall is an uncomplicated arrangement of whitewashed concrete block and a mix of window types, including 6/6 double-hung sashes. A small entry vestibule on the northeast facade contains a set of deteriorated wood doors. Another entrance, on the southeast side of the building, is boarded up with plywood. A 44' x 16' concrete block addition to the southwest facade was built in 1961 to create additional dining space.

HISTORIC PRESERVATION OFFICE HISTORIC SITES INVENTORY NO INDIVIDUAL STRUCTURE SURVEY FORM COMMON NAME: Open Storage Area HISTORIC NAME: Coal Storage BLOCK/LOT: Structure 471 Sievers-Sandberg USARC LOCATION: COUNTY: Salem Pedricktown, N.J. MUNICIPALITY: **UTM REFERENCES: USGS QUAD:** Marcus Hook OWNER/ADDRESS: Fort Dix Zone/Easting/Northing **DESCRIPTION** 1964 Source of Date: Real Property Records, Fort Dix Construction Date: Builder: Unknown Architect: Unknown NA Dimensions: 42' x 125' Style: Square Footage: 230 square yards Form Plan Type: Number of Stories: NA Foundation: Concrete. Exterior Wall Fabric: Concrete. NA Fenestration: NA Roofs/Chimneys: Additional Architectural Descriptions: The Open Storage Area was constructed as a holding area for coal. Its site and skewed orientation result from at least two prior structures that served a similar function; a coal storage shed and a coal platform. The platform was replaced by a covered shed sometime between 1923 and 1942, and in 1964 the current storage area was built. Formerly, a rail spur ran parallel to the

two prior structures during their operational years, and delivered coal directly to the platform, and later to the shed.

I

Foundation:

Concrete

Exterior Wall Fabric:

Stucco covered hollow tile and brick.

Fenestration:

A mix of 1/1 double-hung clerestory windows in the northwest wing and larger 1/1 double-hung

replacement windows elsewhere.

Roofs/Chimneys:

Gabled roof with composition shingle.

Additional Architectural Descriptions:

The Field Engineer Storehouse is a former stable arranged in a cruciform plan. The southeast wing, largest of the four, is articulated by a pair of 1/1 double hung windows and two vehicular bays. There was once an open corral area adjacent to the northwest wing. The building is now used for equipment and records storage.
