Fully Integrated
 FedRAMP Certified
 Shared Service Solution
 Cradle-to-Grave Management

Make data driven decisions with
 GSA Telematics today!

GSA Telematics Program Overview

GSA Fleet stands ready to meet the sustainability goals for the federal fleet as directed in [E.O. on Catalyzing America's Clean Energy Economy Through Federal Sustainability](#) through the use of a comprehensive, fully integrated telematics service. GSA is able to provide the best value to customers that maximize the cost savings from having a shared service telematics program.

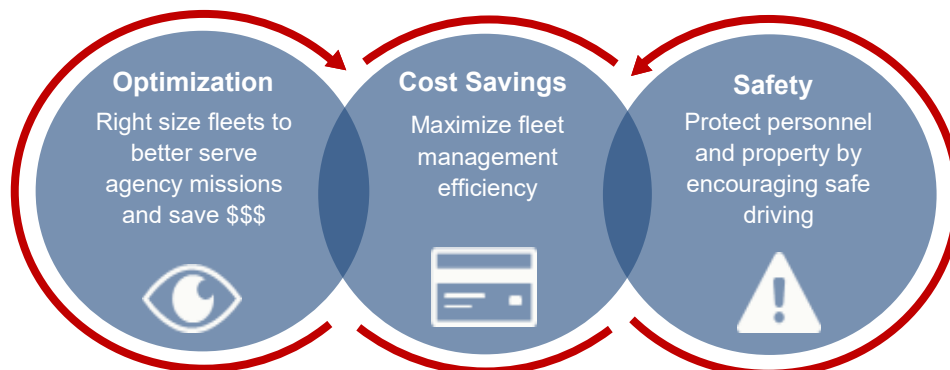

Included in the GSA Fleet monthly lease rate, agencies receive a burden-free telematics solution installed on leased vehicles. The solutions allows for the collection of comprehensive vehicle data such as engine diagnostics, maintenance alerts, and true odometer readings to automate monthly mileage reporting and improve maintenance management. Agencies may access additional GPS services by purchasing an add-on service subscription with streamlined billing through the monthly GSA Fleet leasing invoice.

Why Telematics?

Telematics is a field of information technology that combines telecommunications and informatics to send, receive, and store data connected with fleet vehicles. The data generated from telematics can better inform fleet managers on how to best manage their fleets. This, in turn, can provide cost savings in areas such as maintenance, driver behavior, reporting, fuel use and idling, as well as inventory optimization.

Why GSA Telematics?

- **No agency contracting**
- Hardware & installations handled by GSA Fleet
- OEM embedded solutions on new Ford and GM vehicles
- Monthly mileage reporting automated
- Telematics data summarized & provided quarterly on agency-specific reports
- Additional data and GPS services, if elected, billed to agency via monthly GSA Fleet leasing invoice

Right Vehicle, Right Price, Great Service, and the Data You Need to Manage Your Fleet
