RE: Project: GSA-GOODFELLOW
Pace Project No.: 60376093

Dear Justin Carter:

Enclosed are the analytical results for sample(s) received by the laboratory on July 28, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:
- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

(b) (6)

PROJECT NARRATIVE

Project: GSA-GOODFELLOW
Pace Project No.: 60376093

Method: **EPA 8082**
Description: 8082 GCS PCB SW
Client: BURNS & MCDONNELL
Date: August 30, 2021

General Information:
13 samples were analyzed for EPA 8082 by Pace Analytical Services Kansas City. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3546 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

ANALYTICAL RESULTS

Project: GSA-GOODFELLOW
Pace Project No.: 60376093

Sample: GB-37/5-7 **Lab ID: 60376093004** Collected: 07/26/21 14:16 Received: 07/28/21 04:25 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: GSA-GOODFELLOW
Pace Project No.: 60376093

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 736890

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

D4	Sample was diluted due to the presence of high levels of target analytes.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
P3	Sample extract could not be concentrated to the routine final volume, resulting in elevated reporting limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.
c2	Acid preservation may not be appropriate for the analysis of 2-Chloroethylvinyl ether.

DISCUSSION

This report presents the results from the analyses performed on two samples submitted by a representative of Pace Analytical Services, Kansas. The samples were analyzed for the presence or absence of the twelve dioxin-like polychlorinated biphenyl (PCB) congeners using USEPA Method 1668A. Reporting limits were set to signal-to-noised based estimated detection limits based on the amount of dry sample weight extracted.

The dilution levels noted on the data tables is being adjusted to allow the correct data flags to populate the electronic deliverables as well as the data tables. Samples and MDL extracts were analyzed at elevated volumes. That volume is being treated as a 1x dilution for calculation purposes, with larger dilutions being factored from that volume.

The recoveries of the isotopically-labeled PCB internal standards in the sample extracts ranged from 51-75%. All of the laboratory spike results tables, the isotopically-labeled PCB internal standards in the extracts were recovered within the target ranges for this method. Since the quantification of the native PCB congeners was based on internal standard and isotope dilution methodology, the data were automatically corrected for variation in recovery and accurate values were obtained.

Incorrect isotope ratios were obtained for selected PCB congeners. The affected congeners were flagged "I" on the results tables. Any associated target analyte detections were provided under the estimated maximum possible concentration (EMPC) column on the results tables.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to produce signal at the retention time of congeners 156/157 and to contain trace levels of several other PCB congeners. Congeners present in the sample extracts at levels similar to the method blank were flagged "B" and may have originated in the laboratory.

Laboratory spike samples were also prepared using reference matrix that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 97-118%, with relative percent differences of 1.9-15.7%. These results were within the target ranges for the method. Matrix spikes were not prepared with this sample set.

RE: Project: GSA-GOODFELLOW
Pace Project No.: 60376299

Dear Justin Carter:

Enclosed are the analytical results for sample(s) received by the laboratory on July 30, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:
- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

(b) (6)

PROJECT NARRATIVE

Project: GSA-GOODFELLOW
Pace Project No.: 60376299

Method: **EPA 8082**
Description: 8082 GCS PCB, LV
Client: BURNS & MCDONNELL
Date: August 09, 2021

General Information:
3 samples were analyzed for EPA 8082 by Pace Analytical Services Kansas City. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3510 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 735426

CH: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

QUALIFIERS

Project: GSA-GOODFELLOW
Pace Project No.: 60376299

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 735760

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 736397

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

c2 Acid preservation may not be appropriate for the analysis of 2-Chloroethylvinyl ether.

APPENDIX G – DATA VALIDATION MEMORANDUM

Date: October 18, 2021

To: Justin Carter

From: Kortney Blaufuss

Subject: Data Validation Memorandum
QA/QC Review of Analytical Data; Soil Sampling Event – July 2021
Goodfellow Federal Complex; St. Louis, Missouri
Project No. 133835

Soil samples and associated field samples were collected July 19-23 and 26-28, 2021, and were analyzed at Pace Analytical Services, LLC (Pace) of Lenexa, Kansas, or by sister laboratories within their network. This included Pace Analytical National (Pace National) in Mount Juliet, Tennessee or Pace Analytical Services, LLC (Pace Minneapolis) of Minneapolis, Minnesota. Analyses performed for one or more samples for this sampling event included:

Analysis	Analytical Method(s)	Laboratory
Organics		
Total Petroleum Hydrocarbons – Gasoline Range Organics (TPH-GRO)	SW-846 8260	Pace
TPH – Diesel Range Organics/Oil Range Organics (TPH-DRO/ORO)	SW-846 8270	Pace
Volatile Organic Compounds (VOCs)	SW-846 8260B	Pace
Polychlorinated Biphenyls (PCBs) PCB Congeners	SW-846 8082 USEPA Method 1668A	Pace Pace Minneapolis
Explosives	SW-846 8330	Pace National
Semivolatile Organic Compounds (SVOCs) SVOCs – Select Ion Monitoring (SIM)	SW-846 8270 SW-8270-SIM/8270C-SIM	Pace
Inorganics		
Metals	SW-846 6020	Pace
Total Solids	SM 2540G	Pace National
Percent Moisture	ASTM D2974	Pace / Pace Minneapolis

The quality assurance (QA)/quality control (QC) results in association with the soil samples collected were examined for any method-specific requirements. The analytical data were reviewed in accordance with the *Final Quality Assurance Project Plan, Goodfellow Federal Complex (QAPP)*, United States Environmental Protection Agency's (USEPA) *National Functional Guidelines for Organic Superfund Methods Data Review* (NFGO, 2020), and/or *National Functional Guidelines for Inorganic Superfund Methods Data Review* (NFGO, 2020). Additionally, the PCB Congener data were evaluated using the *EPA Region III Interim Guidelines for Validation of Data Generated Using Method 1668 Toxic, Dioxin-like PCB Data* (EPA, 2004). Data qualifiers, when appropriate, were added to the data in accordance with

recommendations noted in the above references. The QA/QC review results are discussed below. Table 1 presents the data qualifiers added during this review.

1. Chain-of-Custody (COC) – The COC forms were reviewed for any errors or omissions. The relinquished and received signatures, times, and dates on the COC forms were present and properly signed.

2. Requested Analyses Completed – All analyses were completed as requested.

   Pace Minneapolis noted that one or more PCB congener samples were double spiked with cleanup standards. These were taken into account in the data calculations and were not associated with sample quantitation. Therefore, impact to the PCB congener data was minimal, and no further actions were necessary.

3. Holding Times – All samples were extracted and/or analyzed within their method-required holding times.

4. Sample Preservation – Samples were received by the laboratories within or slightly below the recommended 4 degrees Celsius (°C) ± 2 °C sample preservation temperature range. Since the samples were not frozen upon arrival, no data qualification was necessary.

   - In one or more sample delivery groups (SDGs), the laboratory noted that acid preservation may not be suitable for the analysis of VOC analyte 2-chloroethylvinyl ether due to reactivity with the acid and potential degradation of this analyte. No significant issues were noted with the sample results or QC for this analyte, and no further actions were necessary based on this laboratory note.

   - SDG 60375743: Trip blank sample, TB-3, was analyzed from a vial with headspace. As such, all results were nondetect and qualified estimated at the reporting limit (UJ).

5. Method Blanks – Method blanks were reviewed to assess possible cross-contamination or carry over in sample preparation or analysis. These were analyzed with each analytical batch. General qualification for method blank review is as follows: any detection noted in the blank was reviewed in the associated sample(s). If the sample exhibited a detection of said analyte less than five times this blank detection (or ten times for common laboratory contaminants), the sample was disregarded as false positive and qualified as undetected (U).

   In particular, the congener method blanks were evaluated using the *EPA Region III Interim Guidelines* which states that concentrations less than five times the blank

concentration will result in the associated sample being qualified "B". As such, the samples with "B" flags were qualified as false positive nondetect (U). The laboratory "B" flag should be dropped in the final reporting of the results.

Table 2 summarizes the method blank detections noted during this review. Any data qualifiers added based on method blank detections are presented on Table 1.

6. Rinsate and Trip Blanks – Rinsate blanks were collected due to the use of non-dedicated equipment to evaluate potential cross-contamination between samples caused by residual contamination on sampling equipment. Trip blanks are supplied by the laboratory and sent to the field with the sample containers to evaluate potential cross-contamination during sample shipment. Trip blanks were included with the shipments of VOCs. General qualification for review is as follows: any detection noted in these blanks were reviewed in the associated sample(s). If the sample exhibited a detection of said analyte less than five times this blank detection (or ten times for common laboratory contaminants), the sample was disregarded as false positive and qualified as undetected (U).

   It should be noted that RB-08 is not associated with any field samples included in this review, as they were for a different task and will be reported under separate cover. This rinsate blank was collected in accordance with the sampling plan requiring a rinsate blank to be collected daily while onsite. No detections were noted in this rinsate sample, and no further review was necessary.

   Table 3 summarizes the rinsate and trip blank detections noted during this review. Any data qualifiers added based on these blank detections are presented on Table 1.

7. Surrogate Spikes – Surrogates are added for organic analyses. Surrogates are compounds not normally found in the environment that are added (spiked) into samples and analyzed for percent recovery (REC). For any surrogate REC exceeding its control limit, associated detections were qualified as estimated high bias (J+) and non-detects did not require qualification. Any surrogate REC below its control limit resulted in detections qualified as estimated low bias (J-), and non-detects qualified as estimated at the reporting limit (UJ). For extremely low or lack of surrogate RECs, the non-detect results may have been rejected (R).

   Note: For extractable organics, two or more surrogates of the same fraction (where applicable) are generally allowed outside control limits before data validation qualifiers are added. Additionally, for any dilutions greater than five, it was likely the surrogate was diluted out of the sample in the extraction process, and no conclusions were made for these instances.

For the PCB Congener analysis, the laboratory spiked C-13 labeled congeners in lieu of surrogates. Each case narrative summarized the ranges of RECs for these QC results, with specific results included for each sample. All congener isotope RECs were within the 35-135% QC criteria established in EPA Method 1668A Table 6. No data qualifiers were necessary.

Table 4 summarizes the surrogate RECs outside control limits for this review. Note, surrogates outside control limits for laboratory-specific QC samples were not included, as these are not typically qualified during QA/QC review. Any data qualifiers added based on surrogate RECs are presented on Table 1.

8. Laboratory Control Samples/Laboratory Control Sample Duplicate (LCS/LCSD) – The LCS contains a matrix similar to that of the field sample that has been spiked with known concentrations of target analytes. The LCS is prepared and analyzed by the same method as the field samples. As a measure of analytical accuracy, the results of the LCS are compared against the known analyte concentrations in the spike to determine REC. The purpose of the LCS is to determine the performance of the laboratory with respect to analyte recovery, independent of field sample matrix interference. A LCSD is a duplicate sample of the LCS. The difference between the LCS/LCSD RECs is calculated for precision and reported as the relative percent difference (RPD).

   For any LCS/LCSD RECs exceeding their control limits, associated detections were qualified as estimated high bias (J+) and non-detects did not require qualification. Any LCS/LCSD RECs below their control limits resulted in detections qualified as estimated low bias (J-), and non-detects qualified as estimated at the reporting limit (UJ). For extremely low RECs, the non-detect results may have been rejected (R). For elevated LCS/LCSD RPDs, associated detections were qualified as estimated (J), while no qualifiers were necessary for nondetects.

   Table 5 summarizes the LCS/LCSD results outside their respective control limits for this review. It should be noted that the LCS REC for tetrahydrofuran in QC batch734490 was slightly below the NFGO rejection limit, and all other QC was acceptable. Because of this, the associated results were qualified as estimated at the reporting limit (UJ), rather than rejected (R) based on professional judgement. Any data qualifiers added based on LCS/LCSD RECs and/or RPDs are presented on Table 1.

9. Matrix Spikes/Matrix Spike Duplicates (MS/MSD) – MS/MSD analyses were performed for each sample batch, as sample volumes permitted. Only project-specific MS/MSDs were compared and used for qualification in this review. MS/MSD RECs outside control limits can indicate potential problems with analytical accuracy, while the MS/MSD RPD may indicate problems with analytical precision.

For any MS/MSD REC exceeding its control limit, spiked sample detections were qualified as estimated (J) for organics/estimated high bias (J+) for inorganics and non-detects did not require qualification. Any MS/MSD REC below its control limit resulted in spiked sample detections qualified as estimated (J) for organics/estimated low bias (J-) for inorganics, and non-detects qualified as estimated at the reporting limit (UJ). For extremely low RECs, the non-detect results may have been rejected (R). For elevated MSMS/D RPDs, a spiked sample detection was qualified as estimated (J), while no qualifiers were necessary for nondetects.

Table 6 summarizes the site-specific MS/MSD results outside their respective control limits for this review. Any data qualifiers added based on MS/MSD RECs and/or RPDs are presented on Table 1.

10. Field Duplicates – Eight field duplicate pairs were analyzed for the sampling event included in this review. The purpose of the field duplicates was to provide a QC assessment to evaluate field and analytical precision, therefore, unless significant differences were noted, qualifiers were not applied.

An RPD limit of 30 percent was used for review of the field duplicates. For field duplicate pairs yielding results less than five times the lower reporting limit, a sensitivity test was used. Criteria for the sensitivity test was that the difference between the field duplicate results was less than two times the lower reporting limit.

Table 7 presents detections noted in the field duplicate pairs for this data review. Field duplicate pairs GB-35/3-5' // GB-35/3-5'D, GB-46/2-4' // GB-46/2-4'D, GB-50/3-5' // GB-50/3-5'D and GB-57/6-8' // GB-57/6-8'D had one or more analytes exhibit elevated RPDs or fail a sensitivity test. As such, one or more analytes in the noted samples were qualified as estimated (J) for detections. See Table 1 for qualifiers.

11. Detection and Quantitation Limits – Some samples required a dilution for one or more metals or SVOC analyses. These dilutions were necessary in order to bring the concentration of target analytes within the calibration range and/or to account for matrix interferences. This mainly affected the majority of the antimony results and a few SVOC analytes, as they were all nondetects, and resulted in elevated reporting limits. All other dilutions were detected concentrations above their respective reporting limit. No qualifiers were added based on these dilutions.

Additionally, for explosives samples GB-41/4-6 and GB-41/6-8 in SDG 60376093, the extractions could not be concentrated to the routine final volume, which resulted in elevated reporting limits. These adjustments were necessary for these soil samples to adjust for dry weight reporting and/or during sample extractions to concentrate the sample to the needed volume(s) for analysis. Therefore, although a dilution was not

noted, this resulted in elevated reporting limit for these samples. No data qualifiers were necessary based on the elevated reporting limits.

12. Miscellaneous – In one or more SDGs, the laboratory noted that the continuing calibration verifications (CCVs) for PCB analytes Aroclor 1016 and/or Aroclor 1260 exceeded their control limits. To account for potential high bias, the associated samples exhibiting detections of these analytes were qualified as estimated (J). See Table 1.

    Pace also noted that they did not hold NELAC/TNI accreditation at the time of analysis for VOCs 1,1,2-trichlorotrifluoroethane and tetrahydrofuran. Data were reviewed using the reported QC, and qualifiers were added as necessary based on these results.

    Pace Minneapolis flagged one or more congener analytes with method-specific qualifiers. Unless otherwise noted, these flags should be dropped in the final reporting of the results:

    - C – Reported result was obtained from a confirmation analysis.
    - I – Interference was noted for this reported result. Each of these results were also trace detections below their respective reporting limit, and were reported as estimated (J).

13. Conclusion – The data were reviewed for achievement of any method-specified QA/QC criteria. Data qualifiers added as a result of this review are included on Table 1. With the exception of the rejected (R) 1,1,2,2-tetrachloroethane and methyl acetate results for samples GB-02/2-3 and GB07/7-9 due to lack of MS/MSD spike recovery, all data are valid for use, as qualified, in reporting the results of this sampling event.

Notes:

% - percent
J - trace value detection or qualified as estimated (J)
mg/kg - milligrams per kilogram
ng/kg - nanograms per kilogram
PCB - Polychlorinated Biphenyl
QC - quality control
RPD - relative percent difference
STF - sensitivity test failure
TPH - total petroleum hydrocarbons
U - nondetect
ug/kg - micrograms per kilogram
