PROJECT BACKGROUND

The Limestone Land Port of Entry (LPOE) is in the town of Limestone, Maine in the northeast region of the state. Limestone is 20 miles northeast of the city of Presque Isle. The LPOE is across the border from the Canadian border patrol station located at Gillespie Portage. The international border connects Maine with Grand-Sault, New Brunswick, Canada.

The port is a commercial LPOE that focuses on the inspection and control of people, vehicles, and goods. The LPOE has been operating since 1934, with existing facilities constructed in the 1930s.

The existing main building was built in 1933, which is listed on the National Register of Historic Places. Due to steady increases in traffic and outdated facilities and technologies, the facilities at the Limestone LPOE no longer function adequately and pose safety and security risks for CBP officers and the traveling public. The existing Limestone LPOE has spatial constraints, with limited interior space for offices and processing and limited opportunity for expansion within its current footprint. To address these issues, GSA proposes to modernize the existing LPOE. When completed, the new LPOE will provide adequate operational space, reduced traffic congestion, and safe conditions for employees and travelers. The Environmental Analysis will analyze the potential environmental impacts of the project.

PROPOSED ALTERNATIVES

The Environmental Assessment will consider **“action” alternatives** and a **“no action alternative”**.

The action alternatives may include:

- Acquisition of additional land
- Construction of a new main building, noncommercial vehicle inspection area, enclosed CBP parking, and enclosed mechanical/electrical yard.
- Renovation of the existing historic port building for GSA program space.

Under the no action alternative, CBP would continue to operate under existing conditions.

The Limestone LPOE will be closed during construction and traffic will be routed through Fort Fairfield LPOE.

National Historic Preservation Act: Section 106

Section 106 of the National Historic Preservation Act of 1966 (NHPA) requires GSA to consider the effects of federal undertakings on historic properties. If a federal or federally-assisted project has the potential to affect historic properties, a Section 106 review must take place.

Step 1: Initiate Section 106	Step 2: Establish the Area of Potential Effect (APE)	Step 3: Identify Historic Resources	Step 4: Evaluate Effects on Historic Resources	Step 5: Resolve Adverse Effects (where necessary)
GSA identifies potential stakeholders and creates a plan for public involvement.	The geographic area that the project may impact is established.	Historic resources that are either listed in or are eligible for listing in the National Register for Historic Places are identified through survey, research, and public input.	The potential effects on identified historic resources are evaluated. If there are no potential effects, or no potential adverse effects, the process may end here.	If there are potential adverse effects, GSA will explore measures to avoid, minimize, or mitigate those effects. The resolution will result in a Memorandum of Agreement (MOA) or Programmatic Agreement (PA) recording the agreed upon measures to resolve the adverse effects.
