SUBJECT: Update on Notification Concerning Cooling Tower Legionella Testing Results

DocuSigned by:

Mark A. McCready

6457A1B31A45A...

This is an update to our last memo to PVM tenants on November 1, 2023. GSA has just received the Legionella test results from the retesting that occurred on November 1, 2023 at the cooling tower on the 27th level that we previously notified you of Legionella detected.

The latest results from this location were negative for Legionella (No Legionella Isolated). MRL is the Minimum Reporting Limit. Below are the results.

Legionella Summary Sheet

Client Sample #	Sample Location	Volume (mL)	MRL (CFU/mL)	Results (CFU/mL)	Legionella Isolated
1: 1	Domestic Water Supply	250	0.4	NLI	
2: 2	Main CT	1	10	NLI	

NLI = No Legionella Isolated

As a reminder, the cooling tower was shut down for the season during the week of October 30 and cleaned. This test result confirms No Legionella Isolated in the samples.

We appreciate your patience while we addressed this issue.

If you have questions, please feel free to contact the building Supervisory Property Manager Brian Green at 313-226-2628.
